rating, risk classification. It provides templates (rule templates, table templates) to enable business users to author decision logic an error free manner. iFoundry contains various modules like administration, modeling, reporting etc. It delivers context and customer specific decisions at the time of each customer interaction. iFoundry can make decisions available across the enterprise, from different systems and front ends in real-time, and as web-services/XML. It also consolidates decision logic and data across LOBs, and access them, in real-time, via callable web-services/XML from various applications in the enterprise.

Responsibilities

- Leading the product development team of 6-8 people.
- Developing technical solutions that meet the needs of the business requirements
- Prototyping proof of concepts for demonstrations to clients
- Designing Prototype
- Designing XML Schema
- Creating Unit Test Plan
- Code Review
- Created Azure Durable functions for long running jobs
- Created CI/CD pipelines on Azure DevOps.
- Developed services using WCF
- Developed custom controls.
- Developed automation scripts to create infrastructure and Deploy on Azure.
- Developed one click deployment with Azure DevOps.
